CANVAS *and* SHADE®

WHO WE ARE

We are a canvas manufacturer based in the Hallam area with **over 20 years' experience** within the canvas industry. The main thrust of our business is to manufacture quality finished products for commercial and domestic use.

Tracy Jardim, formally known as Tracy Atkins, started working for Peter Selby in 1998. After 30 years' experience within the industry, Peter Selby retired and Tracy continued on with the Selbys name establishing her own business now known as Selbys Canvas and Shade.

Tracy is very well known throughout the industry for her **perfectionism, outstanding customer service** and her **expertise in delivering a high-quality finish**.

Tracy is able to combine her **37 years of experience** as a sewing machinist and hands on approach to deliver an **exceptional custom made product** for each and every customer order.

Tracy's knowledge of design and manufacturing allows Selbys Canvas and Shade to confidently custom make almost anything from canvas, PVC or shade cloth type materials.

INSTALLATION

We at Selbys Canvas and Shade have access to quality sub-contractor installers who are fully licenced and registered. They comply with industry standards in erecting poles and structures to expertly fit your custom made shade sails, giving you a complete end-to-end result. All our installers have current police checks and working with children certification.

PROTECT AUSTRALIAN FAMILIES IN THEIR RECREATION ENVIRONMENTS

Shade Structures

Shade sails and structures are designed to create outdoor sheltered areas. You will see them tensioned over school yards, aged care facility courtyards, domestic and commercial swimming pools, car parks, playgrounds, and other outdoor recreation areas. A shade sail is versatile, strong and durable and its main purpose is to provide protection from the sun's harmful rays. At Selbys Canvas and Shades we custom make sails from high quality fabrics that are designed to block up to 98% of dangerous UV rays. We can design any size shade sail using this practical, long-life construction fabric together with UV protected commercial-grade cotton and our double stitched sewing method.

Sandpit Covers

Sandpits provide many hours of fun for children and allow lots of different types of activities. The best way to protect a sandpit is with an appropriate custom made sandpit cover that is made to fit the sandpit exactly to measurement. This way it will ensure that the sandpit is protected from any unwanted intrusion of animals, insects and general debris.

Post Pads and Safety Mats

Most childcare play areas and playgrounds will have a pole or hard surface that will need protection with the use of padding. With any activity involving children, safety is always a concern. It is impossible to completely remove the risk of injury for children, especially on playgrounds, but it is still important to take every necessary precaution to try and minimise the potential for injury.

Car parks are another area where a safety pad or post pad could be utilised to help avoid damage to the vehicles from poles. Options as to where these safety pads could be used are endless.

CUSTOM MADE IN AUSTRALIA PVC AND CANVAS PRODUCTS

Trailer Covers

Cage trailer covers are made to order using 650-680 gms ripstop PVC and available in a wide range of colours. All covers come standard with zips for easy access to the back, however extra zips can be added to suit your individual needs.

Truck Tarps + Builder Tarps

Whether you are wanting to cover the roof of your house or cover the load on your truck we have you covered! Our Truck Tarps and Builders Tarps are made to order using high quality 650-680 gms ripstop PVC available in a wide range of colours. We also offer high quality, heavy duty canvas in selected colours that are available.

Chiller Boards

Selbys Canvas and Shade can custom design and manufacture high quality chiller boards to any specified size, ensuring the correct fit for each trailer's unique build, thus maximising the efficiency of multi-temperature distribution between compartments. We can custom design boards with vents that will allow the tempered air to pass through to each compartment to regulate temperature. We also offer sealed and insulated versions for dry goods.

WHAT OUR CUSTOMERS ARE SAYING ABOUT US

CASE STUDY

Groundmaster Aircraft Wheel Stillage – Webbing Development

Groundmaster Engineering Pty Ltd (GME), manufacture the Groundmaster range of Ground Support Equipment (GSE) for the Australian and International aviation industry.

GME designed, developed and manufacture the Groundmaster Aircraft Wheel and Brake Handling System to manage the wheels associated with the wide bodied aircraft Boeing 737-747 & Airbus A320-A380. The system is designed to handle the larger sizes wheels, focusing on reducing the impact to staff, equipment and aircraft, by handling the life cycle of the aircraft wheel. A key component of the system is the Aircraft Wheel Stillage.

A key component of the stillage is the retention webbing and associated mechanical ratchet tie-down. An international airline placed a significant order for Groundmaster Wheel Handling System; this included over 200 wheel stillage's. GME needed to find a reliable and quality focused supplier of the webbing to meet the customer's tight delivery time frames. Tracy Jardim from Selby's Canvas and Shade was referred through to our design team as the person to work with to meet the GME criteria of Quality, Time and Value.

From the first phone call Tracy engaged with the GME design team. The webbing is a load rated retaining component, it is critical the webbing be manufactured to a very tight measurement tolerances and each webbing needed to be load tested and certified. Tracy responded quickly with a quotation and clarifications around the testing regime's required by the 3rd party certifier. Once the order was placed Tracy project managed the manufacturing, testing and certification. Tracy delivered the product well within the project time lines, even after there was an unforeseen design change. Through out the project, Tracy kept the GME design and procurement team updated on the progress of the product.

Selby's Canvas and Shade is the preferred supplier for GME Aircraft Wheel Handling System webbing components. We have engaged Tracy on other projects requiring webbing and canvas with the same professional, customer focused outcomes. I look forward to continuing the relationship with Tracy and the Selby's team on other projects.

Regards,

Trevor Pedwell | General Manager

Front Flap Open

Front Flap Down

Our equipment is generally 'mission critical' to our customers, as we often supply not only the power, but also Hot Water and even enable cooling of their facilities. Due to the equipment's critical nature, on the rare occasion that it stops working, my team needs to be able to respond very quickly and in all weather conditions.

The Turbines are generally located in outdoor areas, which created a problem for us when trying to service them on wet or particularly hot days; we need to protect our customer's business by getting the plant up and running as quickly as possible, but we also need to provide our employees with a safe working environment at the same time.

After doing exhaustive research I couldn't find a single appropriate product in the market, so I sat down with one of my technicians and we put together a list of requirements and some very rough sketches of what we thought we needed for two different 'enclosures', then called Tracy from Selby's Canvas and Shade.

Tracy came out the very next day, went through our rough sketches with us and took some measurements. Within 24 hours she had sourced the correct material (being a Gas Fired Microturbine, we needed to make sure it met the right International Safety Standards) and had a proposal to us, which was extremely reasonably priced.

Within a few weeks of placing the order, we had both versions of our enclosures and they were exactly what we needed!

I've never dealt with a more professional and flexible organisation! Tracy took some rough sketches and a list of requirements and turned it into a product that enables my team to work in any conditions - keeping my customers happy and making my business more efficient and responsive.

I can't recommend Selby's highly enough – I can honestly say that no matter how unique your requirement, you won't be disappointed!!
